

LOKESH T

Lead Full-Stack MERN Developer

Chennai, India | +91 7708325296 | lokesh603@gmail.com

github.com/lokisanhitleson | lokesh.cloud | linkedin.com/in/lokeshofficial

PROFESSIONAL SUMMARY

Lead Full-Stack MERN developer with **11+ years of hands-on experience** building scalable, high-performance web applications. Expertise in React.js, Node.js, MongoDB, and cloud infrastructure with a proven track record of delivering complex full-stack systems for SaaS platforms serving 150,000+ users. Skilled in optimizing performance, building responsive UIs, integrating third-party APIs, and architecting modular, maintainable codebases. Passionate about clean code, modern web development practices, and mentoring junior developers.

CORE TECHNICAL SKILLS

Frontend Stack

React.js, React Native, Next.js, Angular, JavaScript/TypeScript, Redux Toolkit, Tailwind CSS, Material-UI, Responsive Design, SPA Architecture, Performance Optimization

Backend Stack

Node.js, Express.js, REST APIs, GraphQL, WebSockets/Socket.io, Authentication (JWT, OAuth), Request Validation, Error Handling, API Design Patterns

Databases & Caching

MongoDB, MySQL, Redis, Firestore, Database Optimization, Query Optimization, Indexing Strategies, Connection Pooling

Architecture

Microservices, Modular Monoliths, Event-Driven Architecture, Domain-Driven Design, Distributed Systems, Horizontal Scaling, Load Balancing, API Gateway Patterns

Full-Stack Capabilities

Full-stack system architecture, End-to-end feature development, Client-server communication, Real-time applications, Multi-tenant architecture

DevOps & Cloud

AWS (EC2, S3, CloudFront, SES, Lambda), Docker, Nginx/Apache, GitHub Actions
CI/CD, PM2, Deployment Automation, Environment Management

Testing & Quality

Test-Driven Development (TDD), Unit Testing, Integration Testing, End-to-End Testing,
Jest, Vitest, Cypress, Code Coverage

AI & Machine Learning

OpenAI API, Llama API, Multimodal AI, Conversational AI, Voice Synthesis, Vector
Databases, AI-powered Chatbots, Prompt Engineering, LLM Integration

PROFESSIONAL EXPERIENCE

Lead Full Stack Developer | Mazelon Technologies Private Limited

June 2018 - Present | 7+ Years

Lead full stack engineer responsible for building and maintaining production-grade applications, Provide technical leadership, mentor junior developers, and oversee system optimization and scalability.

Key Achievements

- Architected and deployed a healthcare SaaS platform serving 150,000+ active users with multi-tenant support for 100+ clinics/hospitals
- Improved frontend performance by 40% through lazy loading, code splitting, and React optimization techniques
- Reduced backend API response times by 35% using Redis caching strategies and MongoDB query optimization
- Built real-time features using Socket.io enabling live notifications, chat, and instant data synchronization
- Integrated 8+ third-party APIs (SendGrid, Twilio, Razorpay, Zoom) into unified system
- Implemented OpenAI API integration reducing doctor documentation time by 40%
- Mentored 4+ junior full-stack developers, conducted code reviews, and established coding standards
- Deployed applications on AWS with zero-downtime deployments and automated CI/CD pipelines

Major Projects

1. Sevily - Family Health Monitoring Platform

Tech Stack: React Native, Next.js, Node.js, MongoDB, Redis, AWS

Bridging caregivers and loved ones through intelligent health monitoring and voice-recorded reminders

Problem Solved

Adult children living away from elderly parents struggled to monitor health and ensure medication adherence. Existing solutions lacked bidirectional relationships, timezone-aware reminders, and seamless health data integration from native platforms.

Technical Implementation

- Mobile: Built React Native app (iOS/Android) with real-time health data visualization from HealthKit/HealthConnect APIs
- Backend: Designed health data ingestion pipeline with OAuth 2.0 authentication (Google, Apple); built timezone-aware reminder scheduler using Bull + Redis for multi-region support
- Real-time: Implemented WebSocket-based health data sync with encrypted payload transfer
- Features: Voice-recorded personalized reminders, intelligent alarm notifications, bidirectional care relationships, emergency alerts
- Cloud: Deployed on AWS with EC2 auto-scaling, S3 for media storage

2. Mazoapps Health - AI-Powered Healthcare SaaS

Tech Stack: React.js, Angular, Node.js/Express, MySQL, MongoDB, Socket.io, AWS

AI-integrated healthcare management platform for modern medical facilities

Problem Solved

Healthcare facilities struggled with appointment management, patient records organization, and patient engagement. Manual processes consumed excessive staff time and led to poor patient communication.

Technical Implementation

- Frontend: Built Angular and React web apps with Ionic 6 mobile apps; created responsive multi-role dashboards (Doctor, Admin, Patient, Facility)
- AI Integration: Integrated OpenAI API for intelligent chatbot assisting doctors with patient understanding and medical suggestions; also integrated Llama API for on-premise deployments

- Appointment System: Designed comprehensive appointment scheduler with Google Calendar/Meet integration, automated SMS/email reminders via Twilio/SendGrid
- Real-time Features: Implemented Socket.io for live patient notifications, doctor-patient messaging, and real-time admin dashboards
- Database: Optimized MySQL with proper indexing; used Redis for session management and queue processing
- Payments: Integrated Razorpay for secure payment processing and billing automation
- Architecture: Multi-facility support with white-label customization capabilities

Key Metrics

- 4 healthcare facilities onboarded
- 50,000+ monthly appointments managed
- 5/5 provider rating
- 40% reduction in doctor workload
- 60% reduction in administrative overhead

3. Bocxy - Salon & Spa SaaS Platform

Tech Stack: Angular, Ionic, Node.js, MySQL, Redis

Complete business management solution for beauty and wellness businesses

Problem Solved

Salon and spa businesses needed an affordable, easy-to-use platform for appointment management, staff scheduling, and customer relationships. Many used outdated paper systems or fragmented tools leading to revenue loss through no-shows.

Technical Implementation

- Merchant Dashboard: Built Angular web app for staff management, schedule optimization, inventory tracking, and analytics
- Customer App: Developed Ionic app for seamless booking with real-time slot availability and push notifications
- Intelligent Scheduling: Implemented algorithm for optimal staff allocation and schedule recommendations
- Automations: Built Twilio integration for SMS reminders, reducing no-show rates by 35%
- Payment System: Integrated Razorpay for secure transactions and merchant payouts
- Loyalty Program: Designed points-based rewards system encouraging repeat bookings

- Analytics: Created real-time dashboards showing booking trends, revenue metrics, and staff performance

Key Metrics

- 40+ active merchant locations
- 100,000+ monthly bookings
- 5/5 App Store rating
- 35% reduction in no-shows
- 20% increase in merchant revenue

4. Telefy - DeFi Multi-Chain Platform

Tech Stack: React, Web3.js, Solidity, Node.js, Smart Contracts

World's first credit score-oriented decentralized finance platform

Problem Solved

DeFi users needed a unified interface across multiple blockchain networks with innovative credit scoring mechanism to determine personalized lending rates based on wallet trustworthiness.

Technical Implementation

- Smart Contracts: Developed Solidity contracts for Ethereum, BSC, Polygon, Solana, and Cardano with multi-chain deployment
- Tele-Score Algorithm: Engineered proprietary credit scoring system analyzing wallet holdings, transaction history, and on-chain behavior
- DEX (Tele Swap): Implemented Automated Market Maker (AMM) using Uniswap V2 patterns for token swapping with low slippage
- Lending Protocol: Built dynamic interest rate system where rates adjust based on user Tele-Score (innovative approach)
- NFT Marketplace: Created multi-chain NFT marketplace with reduced fees (0.27% vs industry standard 2.5%)
- LaunchPad: Developed Initial DEX Offering (IDO) platform for new token launches
- Frontend: Built React dashboard using Web3.js and Ethers.js for wallet connection and transaction management
- Cross-chain Bridge: Implemented asset transfer bridge for seamless multi-chain operations

5. Rungila - Neuro Adaptive Learning Platform

Tech Stack: Angular, Node.js, MySQL, MongoDB, Redis

AI-powered career guidance using neuro-adaptive assessments and talent matching

Problem Solved

Students lacked access to data-driven career guidance tools. Educational institutions had no systematic way to track aptitudes and provide personalized recommendations. Traditional counseling wasn't scalable or affordable.

Technical Implementation

- Adaptive Assessment Engine: Built algorithms that adapt difficulty and content based on student responses in real-time
- AI Talent Matching: Created recommendation system matching students to 300+ careers using machine learning
- Institution Dashboard: Developed analytics platform for schools/colleges showing student cohort insights and aptitude distributions
- Personalized Learning Paths: Designed system generating customized learning recommendations based on identified strengths
- Multi-tier Access: Implemented separate portals for students, parents, and school counselors with appropriate data visibility
- Database Design: Used MongoDB for flexible student profile data, MySQL for structured institutional data, Redis for caching
- Payment Integration: Added Razorpay for institutional subscription billing

Key Metrics

- 10+ partner educational institutions
- 50,000+ student users
- 90% assessment completion rate
- 85% prediction accuracy
- Government recognition for innovation in Indian education

Development Team Lead | Mic and Mac Solutions Private Limited

January 2017 - May 2018 | 1.5 Years

Projects

1. MileReach - Last Mile Delivery Optimization

Tech Stack: Angular, Node.js/Hapi.js, MySQL, AWS

Intelligent delivery platform with route optimization and real-time GPS tracking

Problem Solved

Manual delivery dispatch systems led to inefficiencies and poor resource utilization. Customers had no visibility into delivery status. Route optimization opportunities were missed, increasing operational costs.

Technical Implementation

- Route Optimization: Implemented algorithms optimizing delivery routes by proximity, urgency, and vehicle capacity (20% time reduction)
- Real-time Tracking: Built GPS tracking system with Socket.io for live delivery location updates accessible to customers
- Automated Dispatch: Created intelligent system assigning deliveries based on driver availability, location proximity, and specialization
- Barcode System: Integrated barcode generation and scanning for proof-of-delivery and inventory tracking
- API Integration: Built client APIs allowing businesses to track shipments programmatically
- Driver App: Developed mobile app for delivery personnel with navigation, customer contact, and digital signature capture
- Analytics Dashboard: Created performance metrics dashboard showing delivery times, completion rates, and cost per delivery
- Architecture: Used Hapi.js for high-performance backend, Redis for real-time data, AWS for scalable infrastructure

Senior Software Developer | Asterfone Technologies Private Limited

April 2014 - December 2016 | 2.5 Years

Projects

1. Aster Dialer - Enterprise VoIP Call Center

Tech Stack: PHP, CodeIgniter, Bootstrap, MySQL, Asterisk PBX

Comprehensive call center solution with predictive dialing and AI-powered features

Problem Solved

Call centers needed affordable, feature-rich solution for high-volume calling with predictive dialing, lacking existing commercial solutions' customization flexibility and cost-prohibitive pricing.

Technical Implementation

- Predictive Dialer: Developed algorithms automatically dialing multiple numbers and connecting answered calls to available agents (40% productivity increase)
- Asterisk Integration: Configured Digium Asterisk PBX with custom dialplan scripts and AMI (Asterisk Manager Interface) integration
- Call Recording: Implemented call recording with playback, download, and search capabilities with compression for storage efficiency
- IVR System: Built Interactive Voice Response system with customizable workflows and campaign management

- Real-time Monitoring: Created dashboards for supervisor whisper (listen to calls), barge-in (join calls), and agent performance tracking
 - Reporting Engine: Built comprehensive analytics with call logs, agent statistics, campaign metrics, exportable reports
 - CRM Integration: Designed API-first architecture enabling seamless CRM integrations via webhooks
 - Backend: Built PHP/CodeIgniter application with clean architecture supporting 100,000+ daily calls
-

CERTIFICATIONS

Node.js (Intermediate) Skills Certification | HackerRank | *October 2025*

- Validated expertise in Event-Driven Architecture, Concurrency, RESTful API Design, and Express.js

MongoDB Developer's Toolkit | GeeksForGeeks | *January 2025*

- Specialized in CRUD operations, Indexing Strategies, Data Modeling, and Aggregation pipelines

AWS Solutions Architect - Fundamentals | AWS | *October 2025*

- Covered AWS Well-Architected Framework, VPC Architecture, and Resilient Cloud Solutions

AWS Cloud Computing Essentials | AWS | *October 2025*

- Validated skills in Solution Design, Security Best Practices, and Cost Optimization

Problem Solving (Basic) Skills Certification | HackerRank | *October 2025*

- Demonstrated proficiency in Data Structures, Algorithms, and efficient problem solving
-

EDUCATION

B.Tech – Computer Science & Engineering | Veltech University

Diploma – Computer Engineering | Government Polytechnic College

ADDITIONAL HIGHLIGHTS

- Built WhatsApp Business API integration for automated messaging and live chat
 - Developed scalable queue architecture using Bull + Redis handling millions of jobs monthly
 - Modernized legacy monoliths into modular, service-oriented architectures
 - Integrating modern LLMs, Web3, payment systems, reminders, and real-time communication
 - Experience building mobile apps (React Native + Ionic)
 - Set up automated CI/CD pipelines reducing deployment time by 70%
 - Strong debugging skills: Chrome DevTools, React DevTools, Network profiling
 - Experience with micro-frontends, dynamic imports, and performance monitoring
 - Excellent API contract design and documentation practices
 - Experience with load testing tools (k6)
-
